

F1C. 29

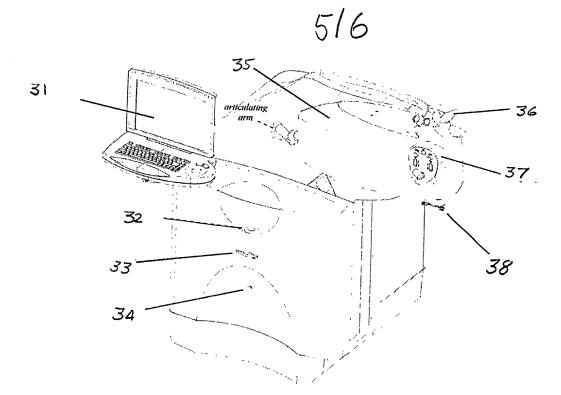

4/6

- 210 move a motorized objective lens to a desired position based on a desired value
- determe an actual linear movement value of the objective lens
- 230 compare the desired position value to the actual linear movement value
- when the laser focal depth value and actual linear movement value fall outside of an acceptable range, done one or more of the following:

provide an audible warning; provide a visual warning; prevent laser operation or treatment; or reposition lens.
